EHS Fall Arrest Contractors Harness

This harness is suitable for use by any person who has to perform work higher than 1.8m off the ground, where the possibility of a fall exists. This harness was designed with the average construction worker in mind. The harness comes complete with a 1.75m double shock absorbing lanyard and large scaffold hooks that are permanently attached to the back of the harness. It is fully adjustable and will fit almost any size. The harness has a front attachment point that will allow the user to make use of multiple fall arrest systems such as a vertical life line and retractable life lines. The frontal attachment also serves as the rescue attachment. The harness conforms to:

SANS 50361
