- RISK ASSESSMENTS & FALL PROTECTION PLANS

Rope Evacuation Kit

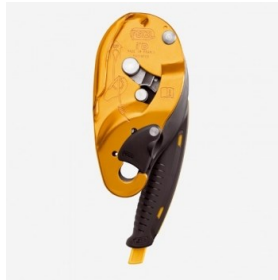

This kit can be used in situations where there is danger and the worker must evacuate without the help of a fellow worker. It is important that there is anchor-age potential in order for the worker to attach the anchor sling. As soon as the kit has been assembled the worker can descend down the rope safely to the ground. Assembly does not take long and the kit is not difficult to use, however training and or prior knowledge is advisable.

Rope: SANS 51891 (CE Approved)

ID: CE EN 341 class A, CE EN 12841 type C

Carabiner: SANS EN 362

Anchor Sling: SANS EN 566
