- HEIGHT SAFETY AND RESCUE TRAINING
- SAFETY HARNESES AND LANYARDS
- FALL ARREST BLOCKS
- RESCUE KITS
- LIFTING & LASHING
- RISK ASSESSMENTS & FALL PROTECTION PLANS

Temporary Vertical Lifeline

The Temporary Vertical Lifeline can be used in situations where the solution must be mobile, and a fixed vertical lifeline is not an option. It can be used in a situation where climbing up and down with a lanyard becomes a time restraint, one can change over to the temporary system and use the fall arrestor as the safety device. Please note that one must be connected with one anchorage point at ALL times. The kit comes complete with all components needed and is easy to assemble and easy to use. It is however very important to have prior training or knowledge of safety at heights in order to use the equipment correctly. This kit comes in lengths of; 25m / 50m

Rope: SANS 51891 (CE Approved)

Singing Rock Locker: EN 353-2 , EN 358

Carabiner: SANS EN 50362

Anchor Sling: SANS EN 50566
